

## Vacuum Blog

Powerful dust extraction is crucial to any woodworking shop, construction site, or general renovation project. Selecting the right extractor will not only maintain a clean and efficient job site but will ultimately reduce harmful dust and concrete particles and eliminate an infiltration in you or your client's home or workspace. With so many models to choose from, it can be an intimidating endeavor to select the right vacuum, particularly for a beginner - but FEIN Turbo vacuums are not only workshop favorites for ease of use, but for their ergonomic build, low volume, and power.

No matter the project you are starting, if you require dust extraction, you are going to make a mess. Spend less time cleaning up with any one of FEIN's high-power, German-made vacuums. All of their models are rated 4.5 stars or higher. Their customer reviews speak for themselves!

"Surprisingly quiet!"

"Twice the suction of the competitor."

"I want to praise the flat top design!"

"The suction is better than any other vacuum I've owned."

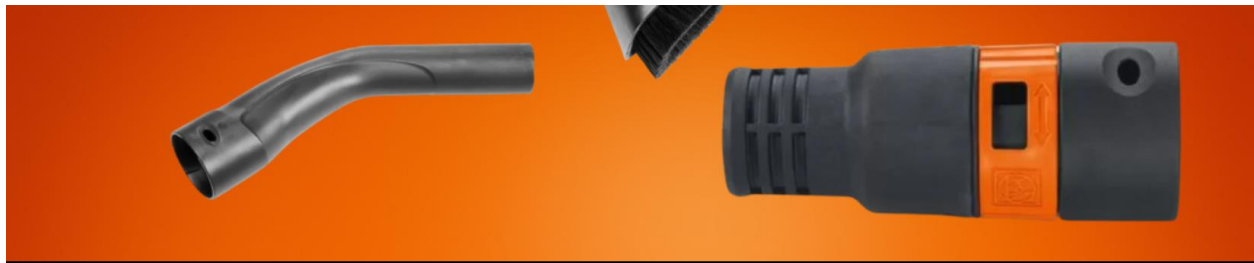

**(Insert video of vacuum autostart)**

All FEIN Turbo vacuums include 13-foot hoses, 19-foot power cords, automatic power, a Softstart feature, wet and dry capabilities, L dust classification, and Autostart tool coupling, which connects power tools like their MULTIMASTER or an angle grinder, and your FEIN vacuum turns on automatically when you power on your tool, saving you time and energy. Their

quiet operation and accessibility will guarantee a clean and efficient workspace with products that will last.

All FEIN Turbo dust extractors are fully certified HEPA products and include matching connections for other FEIN tools. HEPA dust extractors use a HEPA filter, made of finer material, and trap more air particles as it operates. Whether you are applying your vacuum to a liquid, coarse debris, fine or hazardous dust, each FEIN HEPA unit captures and retains a higher rating than the standard 99.97% of all contaminants, which is more than the average air filter on the market. If your project is set in an OSHA-regulated environment that requires Table 1 compliance, a HEPA filter is a requirement for your device.

Select from the Turbo I, Turbo II, or Turbo II X AC HEPA model, all of which include 1,100 Wattage, 151 CFM air volume, 98.4" of static water lift, 13-foot-long vacuum hoses, quiet operation, AutoStart with power-on delay, and 19-foot power cords, complete with rimmed hooks for tidy storage. The FEIN Turbo products also sit atop large wheels that rotate 350 degrees, making these vacuums perfect for use in tight spaces with their flexibility. The Turbo II X AC HEPA in particular exceeds requirements for EPS for RRP silica standards, with an efficiency rating of 99.99%.

## VACUUM ACCESSORIES

Complete your new shop vac or dust extraction product by adding FEIN's line of quality accessories. Select from your choice of pleated or non-woven filter HEPA airbags, as well as individual suction hose, tool coupling complete with suction control, a step adapter, rotating dusting brush, upholstery nozzle, or crevice nozzle for those tight corners and grooves. FEIN has also created their large accessory pack, complete with two metal suction tubes, one

combination tool with interchangeable inserts, one crevice nozzle, a dusting brush, and one elbow.

To build your own system, and upgrade your new vac to its fullest potential, invest in the FEIN MULTIMASTER! The FEIN MULTIMASTER MM 500 Plus Basic and MM 700 Max Basic Sets, which are cordless and corded. These sets provide one extraction system, two sanding pads, and five aluminum oxide sanding sheets each. These full sets will allow your FEIN vacuum to reach its full potential and perfect the outcome of your project.

Smaller jobs may not necessarily require a full set or top-of-the-line product, but a smaller, portable vacuum. How often you change your filter bags will depend on usage, but typically, smaller dust extractors require more frequent filter changes. FEIN offers vacuums ranging from 5.8 gallons, or their Turbo I, to 9.8 gallons like their Turbo X AC HEPA. Larger capacity vacuums are recommended for larger workspaces. Depending on your usage and applications, dust extractors on the lower end of the market have 50 CFM. For a solid all-around dust extractor that keeps your shop clean and is portable enough to take on your professional job site, FEIN's line of TURBO vacuums all have a minimum CFM 151 rating, making them the best option for usability, efficiency, longevity, and precision.

Now, you can save big on select FEIN vacuums! This offer extends from August 1-September 30. Head to your local hardware store, visit their website, or view their products on Amazon!
